

## THE USE OF ALBUTEROL

*Albuterol causes the relaxation of smooth muscle around the airways, this allows easier breathing.*

The generic, identical chemical equivalent of Albuterol can be ordered online from Internet pharmacies. Click the button below to see the lowest generic price that our researchers could find.

An inhaler is albuterol inhaler for asthma is based on the prescription that is typically used when an asthma attack. Albuterol may cause side effects and the amount of inhalations should not be administered more frequently than expected.

### **WHO USES AN ALBUTEROL INHALER?**

Albuterol inhaler is used mainly by patients with asthma or exercise induced asthma, whose airways are obstructed breathing (bronchospasm). Can also be used to treat patients with emphysema and chronic bronchitis when their symptoms are related to a reversible airway obstruction.

## WHO SHOULD USE AN ALBUTEROL INHALER ATTENTION?

Patients with coronary artery disease or disorders heart rhythms (arrhythmia) must use an inhaler albuterol with caution. The combined effect of stimulant medication albuterol can be affected by heart rate and blood pressure and may potentially cause chest pain in patients with coronary artery disease.

Excessive use of inhaled salbutamol has adverse effects on the heart. Remember to always follow the correct inhalation technique and specific instructions on the packaging of drugs must be strictly followed.

Albuterol inhaler is a metered-dose inhaler (MDI) which usually comes either CFC (chlorofluorocarbon) or HFA (hydrofluoroalkane) driven. CFCs are commonly used propellant in the first days of MI.

## WHAT TYPES OF ALBUTEROL?

HFA propellant is more environmentally friendly in the new models of MDI. An HFA-propelled albuterol inhalers may taste and feel different to have a CFC-propelled one. You can feel the spray of an HFA-propelled inhaler softer.

Propelled albuterol inhalers will be CFC-free, as they were deemed harmful to the environment, contributing to the depletion the ozone layer above the Earths surface. In effect after December 31, 2008, the CFC inhalers and propelled will not be available in the United States.

Therefore, CFC-propelled albuterol inhaler users are urged to consult their health care provider to see driven HFA inhalers as soon as possible that the FDA (U.S. Food and Drug Administration) has approved it and the manufacturers have increased production to an adequate supply and purchase.
